Canada Year Book for 1936 Is Out.

Giving complete statistics on Canada's natural resources, production, trade, transportation, finance, education, and presenting a comprehensive study of the social and economic condition of the Dominion, the 1936 edition of the Canada Year Book, published by the General Statistics Branch of the Dominion Bureau of Statistics, is off the press.

Among the special features in the 1150-page volume this year are a special article, "Canada on Vimy Ridge," and statistics covering the construction industry in Canada.

A new series of month indexes of retail sales, 1929 to 1935, are also included, as well as principal statistics of chain stores and the motion picture industry. New material is included on municipal taxation and estimate of national wealth.

Improvement has been effected in the presentation of the financial statistics of the provincially controlled schools of Canada by collection of data on a more comparable basis from all provinces. One section is devoted to the death of King George V and the succession of His Majesty the King.

When It Comes to Losses!

For some years a tremendous fuss has been raised about the financial loss entailed in the federal government's action in supporting the stabilisation of wheat prices, says Wheat Pool Budget. But whatever this loss may amount to it is safe to say that it will not be a fraction of the total losses sustained by the operation of the Canadian National Rys. from year to year. It has been estimated that this railway enterprise costs Canada \$95.13 a minute, \$5707.76 an hour, \$136,986 a day, and \$4,109,589 a month in actual losses.

Canadian National Railways

Midget Baseball.

Local ball fans were given another treat at the local diamond on Friday, when teams from the Midget League staged a contest. The Elks and Cubs were the teams in action, and the players sure did their level best all thru the game. The playing was done on the softball grounds, where the mileage is less on doing a tour of the bases.

As may be judged by a look at the score, home runs were a feature of the game; among those who made a tour of the bases on a thru trip being Archie Wood.

Of course they had a referee, too. Little Jackie Mayer seemed to be the C.O., whose commands were obeyed pronto. Eddie Collins was the pitcher for the Cubs, and Norman Waddell did the same for the Elks. The score stood—Elks 28, Cubs 22.

Manager Jimmy Kelly is trying to arrange a game with Spruce Grove Midgets.

Dr. Walton Returns.

Dr. Walton and Mrs Walton and family have returned from a 30-day trip, which included visits to Vancouver, Victoria and across the line to Seattle, Tacoma, Bell Ingham. During their peregrinations they met up with some former residents, including Mr and Mrs H W Dudge. Dr. Walton resumed his practice July 18.

Sunday's Missionfest.

A Missionfest was held on Sunday at St Matthew church (Missouri Synod), Rev Emil Eberhardt pastor. Rev Fred Ulmer preached at the morning service, in German. At the afternoon service Rev F Ulmer preached in the English language, and the Rev Nadon of Kochfort Bridge preached in German. A very large crowd attended both the services.

Sporting Notes.

Sunday's senior ball game at Gibb's resulted: Stony 6, Gibbons 5.

At the Onoway vs. Stony Senior ball game here, on the 15th, Stony won, 10-6.

The boxing match and dance at Onoway on Friday night attracted some of the local sports to the town up north.

The next sports day up at Onoway is Wednesday, Aug. 12 h.

Beware of Fires!

Provincial Forestry Service officials have issued a plea to all residents and travellers in bush country to "use every precaution" against starting fires which might get out of control.

Because of lack of rain for the past few weeks in many sections, they said, the danger of forest fires is great.

We Strive to Please.

A dejected man entered and said to the clerk "I want a quarter's worth of carbolic acid."

"Sorry," said the clerk, "you got into the wrong store. We deal only in hardware, but we have a choice line of ropes, razors and revolvers."

Loans For Agriculture

Appropriate was the warning issued recently to investment companies and investors by S. P. Grosch, K.C., chairman of the Local Government Board of Saskatchewan when he told the Investment Dealers' Association of Canada in session at Jasper, Alberta, that they could not expect to be collectors alone, but must be prepared to continue to loan money.

At the same time, according to press reports of the convention, Mr. Grosch told the bond dealers that they "must be quick to offer concessions and help in debt adjustment if investors are to retain their status and the protection they now have."

It is generally well known that many of the loan companies, if not all of them, have shut down on loans in the prairie provinces and particularly in this attitude applicable to loans to farmers. Where the security is ample and prospects of repayment on maturing dates exceptionally good the mortgage companies are accepting a limited number of "risks" in the cities, but little if any loan money is available to western farmers just now, no matter what their record, how good the security, they have to offer or how excellent the character of the prospective borrower.

Thus the farmer and the agricultural industry generally in the west is in somewhat parlous condition when it comes to securing credit to make needed improvements or to carry on operations. It is true that there are governmental boards in existence for the purpose of making agricultural loans but these institutions have either no money available or such a small amount in comparison with the needs of the day that they are obliged to restrict their activities to a few select loans.

In the very few instances where mortgage corporations are prepared to advance money they are still insisting on a return of seven per cent. for their investment and this is a higher rate of interest than borrowers can afford to pay in the light of income from ordinary revenue sources.

It is admitted, of course, that there are two sides to this story as with most stories. Loan company managers say that as custodians of private funds they cannot afford to loan money in the prairie provinces at the present time and particularly they cannot afford to run the risks of making loans to agriculturists. They point to the past few years of combined general economic and agricultural depression, the latter resulting from drought, surplus stocks of wheat and low prices for agricultural produce as an excellent reason why they should keep their purse strings tightly drawn when the farmer asks for a loan.

But more particularly do they inveigh against what they regard as repressive legislation enacted by the several provincial governments as a potent reason for withholding credit from the farmers, legislation which has been placed on the statute books in the belief of the sponsors that they are protecting debtors at a time when they knew not which way to turn to escape from almost intolerable burdens.

Possibly the loan companies themselves are not altogether without blame for this class of legislation in at least some instances, if Mr. Grosch's diagnosis of the cause of it is correct, for he is reported to have declared his belief that "one of the chief reasons for placing upon the statute books legislation which limits the rights of loan companies is to be found in the fact that some companies have adopted an attitude of drift and desire to wait until something turns up, with the result that the debtor gets in touch with a member of the legislature and demands all sorts of drastic legislation against loan companies."

One cannot get away from the fact that in the past four or five years, because of depression, conditions and lack of credit, farm property has perforce been allowed to run down at heels, due to the impossibility of renewing or replacing worn out equipment in anything like the degree necessary to continue to operate on an economic scale or to provide new implements to meet changed methods necessitated by changing conditions. Almost every farmer knows by experience that this is the case and if he is unable to secure the necessary credit to enable him to replace the worn out tools of his trade and to purchase new equipment necessary for economic operation, the day when he is going to be able to pay his past indebtedness is further deferred and the loan company and the farmer alike suffer as a result.

Since the entire western country is still largely dependent upon agriculture for its future as well as its present welfare, it would appear to be good business for the loan companies to offer concessions in the matter of debt adjustment to a feasible limit and continue to loan money at a reasonable rate for agricultural purposes where the security is satisfactory. Such a course would appear to be in their own interests, in the interests of the clients whom they represent, in the interests of the farmers and in the interests of the country to do so.

The early Indians of North America made beads from the shells of clams, fresh-water mussels, and used the beads as a medium of exchange. It was called "wampum."

Junior: "What are distant relatives?"
Father: "They're the kind of people who call on you after making a long trip, and wish to avoid paying hotel bills."

Clever Men Beat Bank

Worked New System But Were Subsequently Caught

This stunt was revealed by an official of an important bank, victimized by the perpetrators, who since have been arrested. . . Two partners, ostensibly operating a legitimate business, opened a check account and deposited \$10,000. Within three months they had increased the fund to \$32,000, making the deposits in person, and getting to know the bank tellers. . . One partner then appeared, asking to cash a partnership check in the sum of \$29,458.27. The teller recognized the signature, okayed it, and then—as is customary—used the tel-autograph to ascertain whether a sufficient balance was on hand.

Simultaneously, the other partner appeared at another teller's window, asking to cash a \$29,458.27 check. This teller also used the telautograph, and the official upstairs wrote in reply: "Okay, okay. I told you it's okay." . . . The loss was more than \$27,000.—New York Post.

Eliminates Fire Hazard

Automatic Extinguisher For Airplanes Has Been Perfected

Fire is to be banished from aviation, according to British scientists who have been working for a long time on a new blaze-prevention system for airplanes. Reports received in London say an automatic fire-extinguishing arrangement has been perfected which makes it almost impossible for a machine to catch fire, either in the air or after impact with the ground. Extinguishers are fixed in vital parts, on the gasoline tanks, with jets leading to the gasoline pipes, over the engines, in the passenger cabins spring-operated automatic nozzles, and on the fuselage. They have spring-operated automatic nozzles which act if a bump exceeds the pressure at which the spring is set. Extinguishing liquid is sprayed even before fire can start and no flames can survive the action of this liquid.

Hypnotic Suggestion

Lecturer Claims It Is Wonderful Help In Dentistry

Students of the Royal Dental Hospital in London have had their teeth cracked, chipped, filled and extracted, all without anaesthetics—and all without pain. It's done by hypnotic suggestion.

"There is nothing mysterious about it," claims William Lovatt, who is lecturing on "hypnotic dentistry" in several large London hospitals, "it is a perfectly natural process and in no way harmful."

"A suggestible patient—and 70 per cent. are—has only to accept suggestions for anaesthesia and he can submit to the forceps or drill confident that he will feel nothing, either at the time or afterwards."

Experience with 3,000 cases, he says, has convinced Mr. Lovatt that the possibilities for hypnotism in modern medicine are enormous.

Lifted Tons Of Money

W. T. Dagger, of Blackpool, England, just retired from the Corporation service, has lifted over 300 tons of money in his 30 years of collecting from penny-in-the-slot meters. His collection, he estimates, has averaged \$90 daily in coppers, or about \$675,000 in 30 years. As 45 in copper weighs just over five pounds, his aggregate collection totals 302 tons.

Using New Ceremony

Dominions To Have Special Part In King's Coronation

The British Dominions will have a special part in the crowning of the King, a cable to the New York Times from London, said. It adds that following the coronation next May, King Edward VIII. will make a tour of the Dominions.

"When Edward is crowned in Westminster Abbey on May 12, 1937," it says, "Canada, Australia, South Africa and New Zealand will receive positions in the ceremonies emphasizing their new importance as self-governing nations under the Statute of Westminster, enacted since the last coronation."

"In accordance with this statute, the King becomes not only ruler of the British Empire as a whole, but separately and distinctly King of the Dominions. A new ceremony will be prepared stressing this conception of the King as the direct head of each Dominion. Through the Dominions Office conversations have reached an advanced stage regarding the exact part the Dominions will play. The crowning of the King in this new form will be the prelude to a royal tour of the Dominions."

SELECTED RECIPES

ROLLED NUT WAFERS

1/2 cup "Crown Brand" corn syrup
1/2 cup butter
1 cup bread flour
1/2 cup sugar
1 cup chopped walnuts, or peanuts
Heat the "Crown Brand" corn syrup to the boiling point, remove from heat and add butter. Then, slowly and stirring all the time, add the flour which has been mixed and sifted with the sugar. Now add the chopped nuts. Drop small portions from the tip of a spoon on a greased cookie sheet, 2 inches apart. Bake in a slow oven. These cookies can be rolled or just left plain.

Gliding In Stratosphere

May Be Possible According To Tests Made In Moscow

Gliders may be able to reach the stratosphere ere long, according to reports from Moscow. By a new method a glider may be towed to a great altitude, the towing wire then paid out until the glider is 6,500 feet above the towing plane. If a second glider is towed by the first and its line paid out it can ascend above the first. Thus a plane flying below the stratosphere can, by this flying "chain" tow a glider miles above it. Gliding Master Vennah has been making the tests.

Trying New Method

On three farms in Oxford county, Ontario, an experiment is in progress with a new method of preserving alfalfa. The crop is stored in the silo in green condition and treated with acid.

Working On Anti-Fog Ray

Marconi Is Busy Trying To Perfect New Invention

Were Charles Darwin alive, he would not agree with the dissipation of the dank vapor which assails Great Britain mainly during cold weather, for the famous naturalist's delight of London was founded in a fog.

"He gloried in its 'grandeur,' as he said, and always looked forward to wintering in the metropolis, attracted by the prospect of a smoky mist. Although the origin of the species of town fog, is the deadly smoke, harkling of ill health, the Victorians suffered these visitations with no hope of a 'cure'; but today scientists are having promising results."

Recently there have been many attempts to find the best method, and the outcome seems to be that future research will be centred around the aeroplane. The basis of experiments has been to spray chemicals down on the fog, and the mist will vanish if sufficient anti-fog mixture is used. Already headway has been made, but the drawbacks at present are the cost and lack of facilities, for a huge fleet of planes would be necessary to remove a yellow "peasoupier."

The most recent anti-fog developments promise to end all this fog, however; in the midst of "war-ray" talk and the "mystery beam," which detects enemy ships and hostile aircraft fifty miles away, comes the report that Marconi has been perfecting a great anti-fog ray.

When, or whether, this ray will mature cannot be said; but it would appear that a definite fog-dispelling invention of wide application will be available. It may be a ray, a powder, or chemicals. Everything depends upon the scientists.

Preferred More Dignity

Servants Of English Earl Did Not Like His Democracy

Many years ago we used to correspond with Auberon Herbert, the son of the fourth Earl of Carnarvon, who, although a vigorous opponent of socialism, was one of the most democratic of aristocrats. He was so democratic that he insisted on his servants sitting at table with him and his wife. His servants disliked his democracy so much that at the end of a week they gave him notice that they were going to quit.—The Argonaut.

Faster Speaking

It is interesting to have the testimony of George Emery (who has written 150,000 words in shorthand) to the fact that people speak much faster than they did; the average increase he estimates at something like 25 per cent. The coming of the motor-car seems to have affected the national rhythm. Even much of the music we hear is taken considerably faster than the composer intended.—London Observer.

Appleford's

Para-Sani

You'll save its modest cost before half the roll is used. That's because this heavy waxed paper keeps left-overs fresh, moist and flavorful. Ask for Appleford's Para-Sani because of the exclusive knife edge cutter on the box.

HEAVY WAXED PAPER

Warehouses at Calgary, Edmonton, Regina and Winnipeg

Interesting Information About Moisture Conditions Necessary For Crop Growth

From 30 to 80 tons of water are required to produce one bushel of wheat under average western conditions, it was revealed by experiments conducted by E. S. Hopkins, Dominion field husbandman, and the late S. Barnes at the Dominion experimental station, Swift Current.

The conclusion as a result of the experiments conducted are given as follows:

(1) Under average western Canadian conditions, it takes from 1,000 to 2,000 pounds of water to produce one pound of grain. Or, in other words, it required from 30 to 80 tons of water to produce a bushel of wheat.

(2) An average summerfallow conserves probably about five inches of moisture. (This includes 1.5 inches conserved during the fall previous to the summerfallow). Then on the average an additional amount of about 15 inches is conserved during the fall immediately preceding the crop; then the average rainfall for the growing season, April 1 to July 30, in the west, is approximately eight inches. Therefore on an average "summerfallow" field a total of 14.5 inches of moisture should normally be available for the use of the wheat crop.

(3) Winter snowfall adds but little moisture reserves, the reason being that the ground freezes before the snow occurs, then the snow melts, runs away or is evaporated before the ground thaws in spring.

(4) The roots of the wheat plant extend, under ordinary conditions, to a depth of between five and six feet in the soil.

(5) By harvest time, a crop of wheat, whether produced on stubble or on "summerfallow", has usually completely exhausted every scrap of available moisture in the soil to the depth of the roots, some five or six feet.

(6) The belief, held quite generally, that moisture moves continually upwards in the soil by capillary action, has been found to be incorrect. On the contrary it is discovered that the movement of moisture upwards to the surface is so exceedingly slow that it may be considered to all intents and purposes to be negligible.

(7) Rain falling upon the soil tends to move fairly quickly downward, the depth of penetration being determined by the amount of rainfall and the state of the soil at the time the rain occurs. Rain penetrates quicker when the soil is moist than when it is dry. The downward movement apparently continues, becoming slower with depth, but there is a tendency for the area penetrated to become equally saturated quite quickly.

(8) Once rainfall has penetrated the soil three or four inches, that is, to a level below the usual depth of disturbance by implements, atmospheric conditions seem unable to deplete the moisture. It is then apparently only given up by the soil through the medium of the roots of growing plants.

(9) A substantial percentage of the rain that falls is quickly evaporated into the atmosphere. This applies particularly to showers of less than a quarter of an inch. But a certain amount of rainfall is lost by evaporation with every rain. Loss from evaporation is one of the important reasons for relatively low yields of crops.

(10) Under average farming conditions, weeds also utilize a substantial percentage of moisture that otherwise would make wheat or other grain.

(11) Contrary to general opinion, wheat plants do not seem to be injured directly either by hot temperatures or drying winds. It is the lack of moisture, or the drought, that damages the plant. It has been noted that under very adverse conditions of heat and dry winds, crops that are irrigated do not suffer.

(12) Also contrary to general opinion, hot drying winds do not "lap up" moisture from the soil, the reason being that during such periods the top or three inches of soil is already dry, and moisture that has penetrated below that depth is ap-

parently safe from the action of heat or winds. As already stated, most moisture is lost or "tapped up" by the atmosphere during or immediately after rains and not in dry spells.

(13) Until the wheat plant is from four to six inches high, it uses relatively little moisture. From this time on, until about the last week in June, the daily use increases. From April 1 to June 30, the plant normally has used much less moisture than on the average fall. Therefore, a reserve has been built up for use later. From the end of June, however, until July 30, the use of moisture by the plant proceeds at an almost incredible rate, the crop during this short period utilizing all the moisture the soil has previously stored up.

Tree Distribution

Ship Out Over 767,000 Trees In One Month

In April 1938 more than 767,000 trees were supplied free by the Tree Planting Division, Dominion Experimental Farms, Dominion Department of Agriculture, for rehabilitation plantings in the three Prairie Provinces. Over 77,000 trees went to 60 Illustration Stations and District Experiment Sub-Stations and 166,000 to members of Agricultural Improvement Associations. For field demonstration areas about 460,000 trees were shipped to different centres. Conquest, Sask., took 388,150; Aneroid, Sask., 35,450; Porter Lake, Alta., 21,500; Lyleton, Man., 13,000, and the Kinsler, Sask. Municipal Tree Planting Project was supplied with 65,100 seedlings.

The planting of the trees in the different centres was done under the direction and supervision of members of the Tree Planting Division which has its forestry station at Indian Head and Sutherland, Sask.

Tree planting is one of several measures in the program of Prairie Farm Rehabilitation which was begun under the Prairie Farm Rehabilitation Act early in 1936, designed to cope with the serious problems of drought and soil drifting.

Has Become A Habit

Ninety-Year-Old Woman Has Made 67th Ocean Trip

When the steamer *Comoran* docked at London recently, Mr. Robertson Bull, 90-year-old Australian Scotsman, concluded her 67th trip between Australia and Britain in 64 years. In 1872, as a woman of 28, Mrs. Bull migrated with her family from Scotland to Australia. Every year since then, and sometimes twice a year, she has made the voyage between her Australian home and her birthplace. She likes sea travel because it helps her to keep fit. But this time this youthful-looking nonagenarian believes she will visit Scotland for the last time.

"What a difference, now and the old days," she exclaimed. "When I first went out to Australia with the family—I was one of 10 children—they were just trying out the steamships."

"We travelled in the Great Britain, a steamer which still used sails. 'Nowadays I do my physical exercises every morning on board just as I do at home. In that way I manage to keep fit.'"

Making Bricks From Waste

A process of making bricks of all colors from slag and waste products of the mining industry has been discovered by Lyndall Forre of Yeovil, England. Government departments have taken an interest in the discovery, and a plant is soon to be opened at Radstock in the Somerset coal-fields.

An Exact Science

So exact a science is navigation these days that on occasions captains have steered their great liners over the 3,000 miles between New York and Southampton or Liverpool entirely by dead reckoning—made possible only by the radio direction-finder.

Danger Of Wheat Scarcity

Three Poor Crop Years In Succession In United States

The Biblical story of the seven lean years in Egypt which set up the seven fat years is generally accepted as an allegory. But there is no need of going very far to see that it might be something more than that. The United States has had three poor wheat crops in succession, and the drought which swept the northern plains during the last fortnight makes certain of a fourth. The crop of winter wheat is estimated at 473,000,000 bushels and the spring wheat yield, it is feared, will not run above 134,000,000. This will give a total of 607,000,000 bushels, which is considerably below the quantity needed for normal domestic consumption.

Not only is the United States crop small, putting the republic in the list of importing rather than of exporting nations, but the world surplus of wheat, according to the United States Bureau of Agricultural Economics, is the smallest in nine years. From a condition of embarrassment with wheat surpluses, the world has passed in four years to one where there is some danger that there may be scarcity.

A condition of scarcity, of course, means better prices, and prices on the exchanges are already on the way up. Better prices for wheat, Canada's major export, will mean better times in Canada—better at least in the agricultural areas, which have suffered severely in the past few years both from poor crops and poor prices.

But this is not the sort of prosperity that can be enduring. If economic investigation has shown anything in the past decade, it has shown that the prosperity which comes to some out of the distress of others is at best an uncertain prosperity. The best sort of prosperity—the only hopeful sort—is that which is enjoyed by country and city, by employer and worker, by exporter and importer, pulling together and going up together.—Vancouver Province.

Find Old Secret Mint

Counterfeiter's Den In Hungary Where Silver Currency Was Made

A secret mint where false silver money was coined by a gang of counterfeiters nearly 2,000 years ago was discovered in the course of excavations at the lower Danube, near the Hungarian frontier.

Ruins of many Roman settlements were found till now in the valley of the Danube, but this is the first time that remains of the Roman underworld were brought to light. The discovery is particularly interesting because it shows that a considerable part of the ancient Roman coins contained in various numismatic collections, are forged ones.

So Cool--This "Open Air" Crochet

Household Arts
by
Alice Brooks

Charm
in
Each
Sole
of
This
Blouse

PATTERN 5272

See looks stunning (and so can you) in this dashing, crocheted blouse! See how prettily plain stripes alternate with lacy ones? The combination of stitches is very easy, as is each detail of this all-purpose style. Make it right away, in spring or yarn! It's grand for summer or fall, and the plain crocheted skirt makes a smart two-piece! In pattern 5272 you will find complete instructions for making the blouse shown in sizes 16-18 and 38-40; an illustration of it and of the stitches needed; material requirements. Price 20 cents. To obtain these patterns send 20 cents each (40 cents for both) in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. W., Winnipeg.

There is no Alice Brooks pattern book published

Advance Made In Breeding Of Disease-Resistant Cereals Is Remarkable

The Right Of Way

One Never Knows What The Other Driver Will Do

In a general sense, when two cars are approaching an intersection, the car on the right hand side of the other has what is usually termed the "right of way." If your car has the "right of way" over another do not rely very much upon this fact as a haven of safety. The other driver may be careless or reckless in taking a chance of getting by. In any case, there isn't much money in having the "right of way." If there be a collision and your car is damaged, having the "right of way" is not security for the cost of repairs; and if there be loss of life, the "right of way" won't even pay the hospital bill, to say nothing of bringing that life back again. No, no, do not place too much reliance in a general rule of this kind. Drive carefully all the time, and do nothing else while you are at the wheel. If you must do something else, pull off the highway out of the line of traffic and stop your car, but be sure to drive while you are driving—nothing else. A motorist with 25 years' experience said: "I'm never afraid of myself, but it gives me the jim-jams sometimes trying to figure out what the other fellow is liable to do." This man has never been mixed up in an accident, quite probably because he drives, and nothing else, while at the wheel and constantly watches the other fellow.

When Man Gets Melancholy

People Seem Unable To Cope With Petty Ills

Man is powerless against small pains. He can feel a kind of pride in having broken his leg, but he can feel none in breaking a finger nail. He can bear the death of his wife with fortitude, but he cannot bear it heroically when she is stupidly mean to him. He has a certain catastrophe consolation if his house burns down, but has no consolation if his house is hopelessly ugly.

Melancholy, the severest grief of life, is the severest because it does not give way before heroism; there are not heroic victims of melancholy. It is in any case a weakness, or rather a defenselessness in the face of petty ills.—Atlantic Monthly.

Lawyer—"Then your husband, I take it, is elderly?"
Client—"Elderly?" Why, he's so old he gets winded playing chess."

The production of superior varieties of strains of field crops by breeding and selection has been an important function of the Experimental Farms Branch of the Dominion Department of Agriculture since the inception of the Farms system 50 years ago. Indeed, the progress made by the Cereal Division in the creation, testing, and final distribution of superior new varieties of cereals in Canada is an epic in the realm of scientific achievement. The names of such varieties as Marquis and Huron wheat, Lure and Legacy oats, Charlottetown 80 and Mennary barley, Arthur and Chancellor Pease, and Novity flax are not only household words in Canada but of worldwide recognition, while evidence of continued progress is contained in the recent intimation of the coming introduction of a variety of wheat which is capable of withstanding the ravages of stem rust.

In recent years the advance made in the breeding of disease-resistant plants has been truly remarkable. Not only have new rust-resistant and smut-resistant wheats been developed, but varieties of oats resistant to stem rust and smut have also been created. The progress in this particular, so far as the Cereal Division is concerned, has been due very largely to the policy of concentrating the work at strategic points under the direct charge of highly trained men. Thus, the problem of breeding disease-resistant types of wheat has been centralized at the Dominion Rust Research Laboratory at Winnipeg in the very centre of one of the worst rust areas of the West.

While the breeding of rust-resistant wheats and oats have now or less held the public stage, other work of far reaching importance has been quietly proceeding. There is promise of a successful conclusion to the development of varieties of oats which combine high strength of straw with disease-resistance and other desirable qualities; varieties of barley better adapted to different regions and more highly disease-resistant than the commonly grown types; and seed types of flax capable of producing more and better oil per acre.

In addition to these activities, the Cereal Division by Act of Parliament is required to investigate and report upon the eligibility of new varieties of cereals seeking a licence for sale in Canada. It also conducts verification tests of Elite Stocks and Registered Seed Stocks for the Canadian Seeds Growers' Association, as an aid to maintaining the high standards of varietal purity set for such stocks. The success of the verification efforts of the Cereal Division has been made possible in no small measure by the existence throughout Canada of the Branch Farms and stations at which much of the exacting work of testing and appraising varieties is conducted.

Problem Of Education

College Principal Makes Some Criticism Of Present Teaching Methods

Canadian children were "taught too much like parrots when all the time education is the development of life, personality and thinking," Dr. G. W. Kerby, principal of Mount Royal College, Calgary, said in an interview at Toronto.

Dr. Kerby, who attended the annual convention of the Canadian National Federation of Home and School Associations, of which he is president, considered the final examination method "destructive to the personal development of the pupil."

"The problem of education is the problem of democracy," he said, "and the future of our Canadian democracy depends on whether we have an educational system which is a hard-nut, cut-and-dried, strait-jacketed affair or one that is a vehicle of life."

Midget Tree Bears Apples

A bearing apple tree exhibited by the Royal Horticultural Society, Westminster, England, was 18 inches high. One year old, the tree had been raised from a seed and bore four apples, which had a combined weight of 6½ pounds.

WORLD HAPPENINGS
BRIEFLY TOLD

Two hundred persons who were mentioned in the king's birthday honors list on June 23 were received by His Majesty on July 14.

Hon. J. E. Michaud, minister of fisheries, left for the Pacific coast on a study tour of the British Columbia fishing industry.

Pan American Airways was reported to be preparing to start carrying the first paying passengers across the Pacific, in its clipper ships.

Dawn to dusk flights across the Caribbean Sea, putting parts of South America within 24 hours of New York and Chicago is now in effect, Pan American Airways announces.

Prime Minister Baldwin told a large deputation from both houses of parliament that he could not at present promise to initiate any legislation for reform of the House of Lords. Construction of the Bank of Canada head office building will start next spring, it was announced at Ottawa. The building will be four or five storeys high and will cost at least \$500,000.

To be prepared in the event health insurance is introduced in Ontario, the Ontario Medical Association is working on a plan to determine cost of administration, Dr. W. K. Colbeck, president of the association, said.

Concern over the divergent foreign policies of Great Britain and the dominions was expressed by Lieut. Commander Reg. Fletcher, Labor, who asked the government to call a conference of the members of the British Commonwealth to outline a common program.

An exhibit of Canadian prize wheat grown by Herman Treile of the Peace River district, was officially opened at Stanley park by Mayor G. McGeer as the latest addition to Vancouver's many golden jubilee attractions.

King Edward turned over the proceeds of the sale of the gear and fittings of his late father's yacht Britannia, amounting to \$5,000, to the lord mayor of London as a contribution to the King George memorial fund.

After Many Years

Man Paid Back Money Which Lender Had Forgotten

Robert Sturges, optician of Troy, New York, said his faith in humanity is justified. Nine years ago a man came into his business office and was fitted with glasses. Three weeks later he came back to borrow seven dollars to get a friend out of jail. He proposed to repay the money "at the first opportunity."

Just recently a stranger walked into the store and told Sturges, "I've come to pay you back the money I borrowed." It took a lot of explanation but finally Sturges recalled the loan.

House Trailers De Luxe

Have All Comforts Of Home And Bring High Price

House trailers for motorists have become so popular that there are 250,000 of them in use and they sell as much as \$14,000. These de luxe models have all the comforts of home, including mahogany paneling, separate beds for six, electric light plant, electric refrigerator, hot and cold running water, ice water, insulation from the heat and cold, telephone connection with the driver and even air conditioning equipment.

Collier's.

Dr. Arthur H. Compton, University of Chicago, says, suggests that cosmic rays do not come from far off space, but from the earth's own atmosphere, many miles above our heads.

Pioneer Of Western Canada

Oldest Man In Saskatchewan Dies In 106th Year

Murdoch McLean, Saskatchewan's oldest man, died at the farm home of his son, John, in Moosomin district, Saturday, July 11, in his 106th year. Born at Loch Torridon, Scotland, Feb. 20, 1831, he emigrated to Canada while still a young man. He married Annabel McKenzie 52 years ago, and settled in the Tona district southwest of Moosomin, one year after the wedding. Thirteen years ago he lost all his possessions in a fire. Shortly after he retired and moved to Moosomin. Last year he and Mrs. McLean took up residence with their only son on his farm near town. Though his eyesight and hearing had failed in recent years, he took a keen interest in national and local affairs up to the very end.

In the old land Mr. McLean was a fisherman. Born during the reign of George IV, he lived during the reigns of William IV, Queen Victoria, Edward VII, George V, and at the time of his death was a loyal subject of Edward VIII. He was a life-long adherent of the Presbyterian church, and at the last election cast his vote for the Liberal party. He neither smoked nor drank.

Compensation For Colonies

South African Defence Minister Urges It For Germany

Oswald Pirow, defence minister for the Union of South Africa, stated at Pretoria, on his return from London, that "there can be no permanent basis for a peaceful agreement unless Germany is given adequate compensation for their colonies."

This meant, he added, in an interview with Reuters, territorial compensation "not anywhere on the face of the globe but Africa. I found a lot of support (in London) for the view that Germany's co-operation in Africa is vital for the maintenance of white civilization on the continent."

Long Electioneering Trip

Musker Starts 5,000-Mile Tour Seeking Auditor's Job

Alexander Malcolm "Sandy" Smith, noted northland hunter and explorer, began electioneering over a 5,000-mile tour of the territory in Alaska, Monday.

Smith, who was with the Wilkinson Polar expedition and who won a medal for rescue work in Hudson Bay territory, is an independent candidate for territorial auditor.

On his tour he will make use of almost every form of transportation known in the north—airplane, dog team, raft, automobile and boat.

A Family Heirloom

Lunch-Basket Made In Germany Is 150 Years Old

A family heirloom, 150 years old, in the form of a lunch-basket of a type still used by fishermen in the countries bordering on the North Sea, has come into the possession of Mrs. Charles Ross, Prospect street, Tilbury, Ontario.

The basket, which has been handed down from generation to generation, was made in Germany, the home of her ancestors, and is in almost perfect condition.

It is made of straw, firmly woven, stained and varnished and has a cover joined to the basket with straw hinges.

The Duke of York was installed an affiliated member of Glamis, Forfar, Mearns Lodge by James Beattie, the village postman, who is a Right Worshipful Master of Glamis Lodge.

As it ages, brick motor becomes harder.

Assisting Nature

By JACK MINER

Jack Miner, the Canadian Naturalist, sets out in this article the fact that man has "dominion over all."

During the past year I have read a number of articles, both in magazines and newspapers, as well as many letters that have come to me, on the subject of "Nature's Balance," depicting actions or systems on the part of man which the writers described as "interfering with Nature," "Upsetting Nature's Balance," and so on. To all who adopt that attitude I should like to put myself on record to the effect that, personally, I believe the so-called "balancing" of Nature was left entirely with man, and that I believe in assisting Nature for the benefit of humanity. God created everything, everything, and then He created man "in His own likeness and gave him dominion over all"; that is, as I understand it, the power and authority to manage everything here on earth.

Look, for instance, at the animal world, with the live stock in the farmer's barnyard as example. Did God create the Jersey cow, and the Holstein, and the Hereford? No. He gave man the original stock and then God, through man's instrumentality, developed many breeds, some for the high cream content, and others for some to produce the greatest quantity of milk, and some as the best meat cattle. All have been on the earth a long time, of course; but their differences are the result of man's management. And if man had to interfere with Nature to develop them.

Much the same thing is true of the horses, different strains being cultivated for particular purposes, such as the heavy draft horse, the horse for heavy draught work, and the blue-blooded descendants of original Arab stock for racing.

Recall I was in some of the southern United States, where the character of the farm work to be done is too heavy for the common ass, yet where the climate is too warm to permit of the horse doing its best. In that part of the continent, therefore, man has crossed the ass with our common horse and produced a beast that withstands the heat and is also strong enough to do work of tilling the soil. Yes, he has developed the mule. But the mule kicked and, so far as I know, has gone no farther.

In poultry, if you trace back the various species it is very easy to see that it has been the work of man that has developed the different breeds. Leghorns, Brahmas, Minorcas, Plymouth Rocks, and so on, some of which are especially valuable as layers, and others as food. Our much-prized turkey is nothing more nor less than the wild turkey, domesticated and improved.

Seventy-five years ago our Canadian North West was grazed by millions of wild buffalo (Bos bison). Then came the white man, who, realizing the value of the fertile range established a park where a herd was placed to preserve the species from extinction, slaughtered the great roaming herds and, turning the land upside-down, made it into one of the largest and most valuable of earth's great wheat-fields, with towns and cities and stately governmental buildings dotted here and there across its vast expanse. Remember, though, that in order to bring about this state of things, man had to "in-

terfere with Nature" as some would call it.

And speaking of wheatefields, wheat has been man's favorite food for centuries. Yet wheat, even as it was being grown in Canada in comparatively recent years, had certain weaknesses. It had to be planted in the fall and did not always survive the winter. The western winds that were not producing as abundantly as seemed desirable; it did not mature rapidly enough always to escape the early Autumn frosts. Then came to our aid such men as Professor Charles Saunders, now Sir Charles Saunders, cerealist, of Ottawa, and by study, experimentation and the rigid selection of choice strains, developed a wheat that could be planted in the spring, that would yield several bushels more per acre than had been the rule previously, that would mature within a certain period of time, and that yet retained all its former qualities. We have today the Marquis and the Garnet and other species of wheat, developed by man. God created the original, the germ; but man was given, and has used, the power to develop, manage and control it.

Or if you will consider your flower garden, look at the Iris. Give ground to us in America a little, insist that flower growing along the banks of streams, within the cultivated zone, the "flag." From it man has developed Irises that grow three or four feet in height, varied in color and some giving out an exquisite fragrance. But man had to interfere with Nature to develop them. Or take the rose. Did God create the American Beauty rose? No. He gave man the original stock and then man has been given flowers of beauty and fragrance, as the Creator intended should be done.

But let us look at another side of the question. At the same time that God created the little wild rose, He created also the weed, typical of which is the Canadian Thistle. Still he gave to man the brains and the means of controlling these also, so that they may be restrained from predominating the plant world.

If you are raising poultry, or other bird life, valuable to humanity, and hawks, owls, vultures and other vermin begin to destroy and live on the birds, and you fail to take a gun and shoot these pests, then you are putting into the hands of God a very As for me, I thank God for all He made for the raw materials He gave us with which to work; that He made us in His own likeness, after His own image, and endowed us with sufficient brains to develop those raw materials and keep on discovering and bringing within reach of us all the blessings He created.

Not Done In England

Ladies Do Not Wear Hats In Hotel Dining Rooms

"You can't wear that hat here!" said the head waiter at one of London's most fashionable hotels. Hedda Hopper, American actress, reputedly one of the best dressed women in Hollywood, looked up in astonishment. "Why not?" she demanded, hastily feeling the offending bonnet to find out if something had gone astray. "It isn't done in England," said the arbiter of decorum. "No hats in the dining room." "It's silly," she said, after a moment. "Hats are the rage for evening in America." They're bound to be here sooner or later," But Hedda had to take it off.

Bright Crochet For Any Room

PATTERN 5544

Take stock of your room! Are there dull spots that might be brightened with a colorful rug, footstool or crocheted all three in rug wool, rags or candlewicking. Do a number of the sturdy, six-sided medallions, their flowers all colors against a uniform background. Join them and crochet a border border of colorful stripes. In pattern 5544 you will find complete instructions for making the rug shown; an illustration of it and of all stitches needed; material requirements; color suggestions.

To obtain this pattern send 20 cents in stamps or coin (not preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave., Winnipeg.

There is no Alice Brooks pattern book published

"I am surprised as you. You know KEEN'S is the best."

Well, I thought when I was putting up my pickles I could save some money by buying cheap mustard. But never again! Cheap mustard has no the favour, the strength nor the keeping quality. I've learnt my lesson. It pays to buy the best—KEEN'S D.S.F. MUSTARD.

Made from seed grown in the Fens of England. Shells or hulls are removed and only the inner part of the seed is used. Superior grind—no coarse bits of mustard leaves.

In original tins for as little as 10¢

KEEN'S
D.S.F. Mustard

1000 Amburst Street, Montreal, P.Q., Can.

SUNDAY SCHOOL LESSON

JULY 28

CHRISTIANITY SPREAD BY PERSECUTION

Golden text: Be thou faithful unto death, and I will give thee the crown of life. Revelation 2:10.

Lesson: Acts 7:54-8:4; 11:19-21; 28:30-31; 1 Peter 4:12-13

Devotional reading: 1 Peter 1:3-9.

Explanations and Comments

"The Martyr Stephen." Acts 7:58-61. Stephen was one of the seven deacons chosen to relieve the apostles of the task of ministering to the poor. Read in Acts 6:8 to 7:8 the story of his successful preaching, his enemies and his arrest, a defense and its effect upon his enemies, his vision, his stoning and death.

On the cross Jesus had cried, "Father into thy hands I commend my spirit," and "Father, forgive them, they know not what they do." So Stephen called upon the Lord saying, "Lord Jesus, receive my spirit," and "Lord, lay not this sin to their charge." "What did God do for Stephen?" Dr. Parker was asked, and he replied, "In working this miracle of forgiveness in the spirit of the martyred man, God did more for Stephen than if he had sent a legion of angels to protect him from the ruffianism which wrought his death." When he had said this, he fell asleep, a beautiful expression for "he died."

Christianity Spread by Persecution. Acts 8:1-13; 9:1-18; 11:19-21. "Stephen's martyrdom acted like the first taste of blood on a wild beast." A great persecution broke out against the church in Jerusalem arose that day led by Paul, who laid waste the church, entered into every house and dragged out men and women committed them to prison. Compare his own confessions in Acts 9:1-18; Gal. 1:13-24; 2 Cor. 15:9-11; Phil. 3:6; 1 Tim. 1:13. He thought then that he was doing right in persecuting the church, but he is told (read Acts 9:8-11) that he did not change the record of his crimes.

Except the apostles were driven from Jerusalem by the persecution, and went throughout Judea and Samaria, and as far as Phoenicia and Cyprus and Antioch (Acts 11:19) preaching the word.

Peter's Words About Bearing Persecution. 1 Peter 4:12-16. Beloved, do not wonder at having to endure a fiery trial, for it comes to prove you. Rejoice to be partakers of Christ's sufferings and glory—that glory which is surrounding you even now, though you cannot see it yet. Blessed are they when reproached for the name of Christ; because God's Spirit (which is the Spirit of glory and the Spirit of God) rests upon you.

Will Work Together

Canada And United States Co-operating In Weather Check

Canada, it was disclosed, will co-operate with the United States in aeroplane observation of the upper air with a view to increasing accuracy of weather forecasts.

Canada flights will be made from Fort Smith, N.W.T., on the Slave river. Planes will carry observers who will work at altitudes of about 17,000 feet.

The work will be under direction of Dr. John Patterson of Toronto, chief of the Dominion meteorological service, department of marine. It is expected observations will produce information adding to the safety of aircraft operation.

SANCTIONS ON ITALY HEAVY LOSS TO BRITISH TRADE

London.—Sanctions cost Great Britain £4,000,000 (\$20,000,000) worth of exports to Italy during the first half of the year, Walter Runciman, president of the board of trade, told the House of Commons.

Reviewing Britain's trade position for the past year, the minister said that British exporters' hopes would for some time, be centred on expansion of trade with the empire and with the rest of the sterling area. World trade as a whole, however, revealed encouraging features. Runciman said he hoped the lost British export trade with Italy would be regained and told the house steps were being taken to get in close touch with the authorities in Rome in order that obstacles might be removed as soon as possible.

"There has been a year of marked progress in nearly all the principal industries, with the notable exceptions of coal and cotton," he said. "Progress has been especially good in those industries which supply the home market."

Improvement has been widespread and is best illustrated by the unemployment figures, he continued. Railway receipts were nearly £2,000,000 (\$10,000,000) higher in the first quarter of 1936, despite road and sea competition. Besides this, he said, there was an increase in the postal receipts of £4,000,000 (\$20,000,000).

Exports had increased during the period by £2,000,000 (\$10,000,000) but imports had increased to an even greater degree, Runciman told the members.

"There was no cause for alarm, he said, at the speed at which imports increased, provided that year by year they could be absorbed without undue strain on the exchanges and the funds were required for industries."

Next Convention In West

Technical Agriculturists Will Choose City For 1937 Meet Later

Fredricton, N.B.—The 1937 convention of the Canadian Society of Technical Agriculturists will be held in a western Canada city to be named later, it was announced at the 16th annual gathering of the society. Announcement also was made of the re-appointment of H. L. Trueman of Ottawa as general secretary and managing editor of the C.S.T.A. Review.

Giant Artesian Area

Stretches In Ontario From Georgian Bay To Toronto

Toronto.—A survey of Ontario wells undertaken by the provincial mines department, in conjunction with federal geologists and the Ontario Agricultural college, has revealed the existence of a giant artesian area stretching from Wasaga Beach on Georgian Bay to Toronto, Col. R. B. Harkness, natural gas commissioner, announced.

Entertains Legion Officials

Advance Party Guests Of Hon. Vincent Massey In London

London.—Members of the Canadian Legion official party, advance guard of 6,000 Canadian war veterans and others who will be at Vimy Ridge July 26 for the unveiling of the Canadian memorial, were guests on July 14 of Hon. Vincent Massey. The Canadian high commissioner's reception in effect was a reunion of Canadians in London.

New Station For Callander

Callander, Ont.—So great was the increase of railway passenger traffic into Callander since the birth of the Dionne quintuplets, the Canadian National Railways built a new railway station. It replaces the old station, which consisted of two antiquated passenger coaches joined together and standing beside the track.

Examining the teeth of 11,000 girls at the University of California, dentists found only 400 with perfect teeth.

Guarantee Of Support

Withdrawal Of British Fleet From Mediterranean Is Questioned

London.—Withdrawal of certain units of the British fleet from the Mediterranean does not affect Britain's guarantee of support in the event of attack given to certain Mediterranean powers, Foreign Secretary Anthony Eden told the House of Commons.

Eden referred to the "mutual assistance" agreements entered into by Great Britain, France, Yugoslavia and Greece when sanctions were being enforced against Italy and an Italian attack on the British fleet seemed possible.

The foreign secretary's statement was made in reply to a question by Geoffrey Mander, Liberal, who asked whether the withdrawal of fleets units affected the "staff plans" between the four countries for mutual support in the event of attack.

The French government, Eden said, regarded the mutual assistance exchanged between Britain and France as cancelled on the withdrawal of sanctions.

Mander asked whether the other assurances remained in full force. Eden replied that, as regards the British assurances, the position remained as outlined in his speech.

Sir Archibald Sinclair, Liberal: "Haven't Yugoslavia and Greece deserted?"

Eden: "I referred to my speech to our own agreement and not to that of other countries."

End Of Drouth

Chicago Man Predicts End Of Hot, Dry Weather

Chicago.—An immediate end to the drouth, with its crop ruin and threats of rising food prices, was forecast by the man who predicted the hot, dry weather six months before it arrived.

"There would be 'no more damage from drouth,' he asserted, although it might take the country 10 days to accept the fact. By the end of the month, he added, there would be so much rain that 'everyone is going to see that the drouth danger is ended.'"

The man was Selby Maxwell, astronomer-meteorologist, who said he read the good news in the wobbles of the moon.

Maxwell predicted the drouth's end with the same air of confidence with which he warned of its coming around Christmas time in 1935. At that time, he glanced at his long range forecasting charts—based on the distances the moon wobbles in its orbit—and predicted:

"That January and February would have heavy snow, and that drouth would develop during March, April and May and do its worst in June and July."

Scadding In Toronto

Says It's Great To Be Back Home Again

Toronto.—Alfred Scadding came home to Toronto with a cheery grin on his face and a "golly, it's great to be back again," on his lips. He came back to a mother who flung her arms around him and then cried as she saw his bandaged feet; to a group of overjoyed relatives and friends crowding around his stretcher and to a Dr. D. E. Robertson too flustered to hide his emotion.

It was the first time since last January he had been home or had seen his mother and the first time since a few days after his rescue he had seen Dr. Robertson who had spent 10 days with him in the pit that was the collapsed Moose River gold mine.

Will Do Historical Canvas

Canadian Has Commission To Paint Ceremony At Vimy

Toronto.—John Russell, Canadian painter whose exhibitions of statuesque nudes have been a feature of past Canadian National exhibitions here, has been commissioned by the exhibition to record the Vimy memorial unveiling. Mr. Russell has gone to France to do a historical canvas of King Edward unveiling the memorial at Vimy Ridge July 26. It is to be completed in time for the exhibition's opening August 28.

TO ATTEND CONFERENCE

Denton Marsey, one of the young members of the Dominion House, who will represent Canada at the World Youth Conference in Geneva in September.

Inaugurating Air Service

Imperial Airways Directing Trips From Bermuda To New York

London.—A weekly air service between Bermuda and New York will be inaugurated during the coming autumn, it has been learned.

The service will be directed by Imperial Airways, subsidized with a capital grant of £34,500 (about \$172,500), to provide a flying boat similar to the new type intended for main airline routes of the same company.

Also there will be an annual maximum subsidy of £18,000 (\$90,000), to which the Bermuda government will contribute £3,300 (\$16,500), for five years. Otherwise the subsidies will be paid by the colonial official.

Premier King Officials

Lays Corner Stone Of New French Legation In Ottawa

Ottawa.—Premier Mackenzie King laid the cornerstone of the new French legation here on Bastille day, July 14, the national holiday of France. It will stand on the high cliffs of the Ottawa river below the research council building and the bureau of statistics.

Representatives of foreign nations looked on when Raymond Brugere, French minister to Canada, referred to the many ties binding his country to Canada.

BRITAIN WITHDRAWS EXTRA SHIPS FROM MEDITERRANEAN

Now that the apparent crisis in the Mediterranean has vanished, several British warships have been withdrawn from the area, but in future the strength of the Mediterranean fleet will be kept higher than before. Reports from various sources intimate that Great Britain is fortifying an emergency route to the East which will be around the Cape of Good Hope. This route is not dependant upon such bottleneck navigation routes as the Strait of Gibraltar and the Suez Canal.

Economic Victory

Mussolini Pleased With Surrender Of Sanctionist Countries

Rome.—Premier Mussolini, addressing an enthusiastic crowd in the Piazza Venezia, said: "The white flag has been hoisted today on sanctionist bastions."

Lifting of sanctions against Italy, effective by League of Nations order, "represents the surrender of those who would deny us victory," he declared.

Smiling and gay, Il Duce asserted the "economic victory" was due to the Italian people, who, he said, were ready for every sacrifice.

The crowd responded en masse: "No, to you."

Premier Mussolini concluded by saying: "Justice and civilization triumphed in Africa and Europe."

Amid a flag-waving ceremony to mark the end of sanctions, Mussolini moved into a period of intense collaboration with an Adriatic neighbor he once treated coolly—King Zog of Albania.

Of the action of Albania and other nations which refrained from sanctions, Il Duce's Popolo d'Italia said: "The Italian people will not forget this."

Taught by the Ethiopian war and its resultant sanctions the necessity of developing Albania's oil resources to the utmost, Italy has given King Zog five loans totalling about 30,000,000 gold francs.

The Albanian dictator has given Italy a big oil concession, various political promises and a better port at Durazzo for future use.

Strength Of British Navy

Adequate For Any Demand That May Be Made Upon It

London.—Winston Churchill, who as first lord of the admiralty set the British fleet in motion in 1914, told a crowd at Epping:

"I wish to make it quite clear that the royal navy is adequate at the present time for any demand that may be made upon it."

"It is incomparably stronger than any combination of navies which could conceivably be formed among the states of Europe."

Lord Strickland, a native of Malta and owner of newspapers there, demanded in the house of lords that the government "let us have poison gas by the ton stored in Malta."

By this means, he declared, the Mediterranean island would become a base "so strong in defence and counter-attack that there would be no war."

U. S. IS AROUSED OVER LEAKAGE OF NAVAL SECRETS

Washington.—Admiral William H. Standley, acting secretary of the United States navy, said espionage activities of foreign powers might make necessary a revision of confidential navy documents and instructions.

Standley made his statement at a press conference in which the arrest of John S. Farnsworth, former lieutenant-commander in the navy, on charges of selling confidential naval information to an agent of the Imperial Japanese navy, was discussed.

Confirming reports of increased espionage, Standley said that "when there are increased naval activities, there is always an increased effort to obtain information."

The navy now is building 70 new warships, many of new design.

Moving swiftly to bring former Lieut.-Commander John S. Farnsworth to trial on spy charges, high officials hinted that his arrest was only the beginning of a wholesale roundup of persons suspected of supplying United States navy secrets to foreign powers.

After Farnsworth, ill and trembling, was lodged in jail under \$10,000 bail on a charge of purveying confidential data to an agent of the Imperial Japanese navy, navy officers said the United States is "honeycombed" with spying activities.

The determination was expressed to take all possible steps to program the defense of the United States against the Japanese navy.

Justice department agents have not been withdrawn from the investigation with the arrest of Farnsworth. It was learned they will continue to work with naval intelligence men in trailing other suspects on the navy's list.

The Washington Post told of informal conferences between Japanese and American officials. It is said that Captain Tamon Yamaguchi, Japanese naval attaché, conferred with Captain William D. Puleston, chief of naval intelligence. The Japanese embassy said the Farnsworth matter was not discussed.

Collections Show Increase

Income Taxes For Federal Government Make Record

Ottawa.—New records in income tax collections are being made by the federal government. Collections for the first three months of the government's fiscal year totalled \$66,134,762, an increase of \$11,570,132 over 1935 figures.

The same upward trend was shown in collections of customs duties, excise taxes and duties. In the three-month period, customs duties less drawbacks, stood at \$20,053,396, an increase of \$1,473,946. Net excise taxes totalled \$26,406,619, an increase of \$4,244,978. Excise duties, less refunds and drawbacks, totalled \$11,215,376, an increase of \$210,041. Sundry collections decreased \$3,760 at \$180,926.

Buying More Gas Masks

British House Of Commons Asked For Additional Grant

London.—Great Britain has bolstered her air raid precautions. A supplementary civil service estimate filed in the House of Commons asked an additional \$4,250,000 with which to purchase gas masks. Of this amount, \$125,000 was earmarked for the purchase and adaptation of two factories producing masks in the Manchester area.

An additional \$25,000 was allotted for the civilian anti-gas school.

Lemons From Italy

Toronto.—With music, songs and an impromptu parade, 100 Italian fruit merchants celebrated the arrival of five carloads of lemons, the first to reach Toronto from Italy since sanctions were imposed last fall. They paraded through crowded market districts singing "God Save the King," "O Canada," and Italian airs.

RHOSPATE DEFICIENCY AMONG LIVE-STOCK.

Phosphated salt blocks for use in combating the serious effects of phosphate deficiency among livestock have been recently developed by a Canadian salt firm.

Bone diseases and stiff-sickness are caused by a shortage of phosphate in the feed rations of livestock, and it has recently been learned that there are large areas in Canada where the natural crops are phosphate deficient. Western Ontario, Southern Alberta, Southern Saskatchewan, Central Manitoba, and the Fraser River Valley are said to be affected. It is claimed that the new phosphated salt blocks will be equally as effective in preventing and relieving these two diseases in these areas as iodized salt has been in preventing goitre in the great goitre belt, which consists of the Great Lake region in Ontario and the glacier water-fed districts in Alberta and British Columbia.

INTERNATIONAL CO-OPERATION FOR THE COMMON WELFARE.

If only co-operative philosophy governed the minds of the world's statesmen, solutions would sooner be found for the perplexing international problems which keep the nations in a condition of fear and ferment, and retards the return of prosperous times to all nations. The world needs peace, and international co-operation for the common welfare of all, more today than at any time in the past. War, involving all of the great European powers will probably mean not only repetition of wholesale slaughter and economic exhaustion from which the world suffered in the Great War, but a collapse of the social and political structure of all the nations engaged therein.—The Canadian Co-operator.

IS KISSING A CRIME?

Two lovers recently were sentenced to three months' imprisonment for kissing on the street.

The extraordinary thing about this case is not the sentence, but that people should still think they can get away with that sort of thing in Italy.

For years past the Italian authorities have set their faces against such effeminate weaknesses. Their censors have been refusing to pass love films and cutting the kisses in those pictures which are otherwise unobjectionable. And woe betide those who think they can kiss safely in the darkness of the movie-picture houses.

Even holding hands in the park is forbidden, under pain of a fine, or worse. And a wife has been fined because, traveling by rail and feeling tired and sleepy, her head fell on her husband's shoulder.

And Italy was once the home of romance—the land of Romeo and Juliet.

There has been only one period in English history when laws against kissing were enforced. That was in the fifteenth century, and there was a reason for it. A "plague" was raging at the time, and kissing was prohibited because of infection risks.

America has been less tolerant, however. Not so long ago an undergraduate, and a girl were sentenced to fifteen days' imprisonment by a Boston magistrate for kissing in a public restaurant.

Don't Drink Enough Milk.

People in Alberta, Quebec and Ontario do not drink enough milk, according to a survey made by Federal and Provincial Department of Agriculture. While authorities say that each child should take a quart of milk a day, and each adult a pint, the consumption by over 3,000 families in various city and country districts in the three Provinces averaged under three-quarters of a pint per head.

Make Hay in 45 Minutes.

The age-old worry of English farmers the curing of hay in the brief intervals between frequent rains is now being solved by the application of scientific methods. A demonstration held at Fonthill Bishop, Wiltshire, Eng., of artificial grass-drying was attended by over two thousand people. The plant, which cost about \$6000 in all, dries a ton of grass in 45 minutes. The finished product retains its color and food value indefinitely, and the vitamin content is unimpaired in the new curing process. There are about twenty such plants in England now.

WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pounds of bile into your bowels daily. If bile bile flow slows freely, your food doesn't digest. It just decays in the bowels. Gas builds up your stomach. You feel constipated. Bile poisons go into the body, and you feel sour, sick and the world looks pink.

A mass bowel movement doesn't always get at the cause. You need something that works on the liver as well. It takes those good, old Carter's Little Liver Pills to get these two pounds of bile flowing freely and make you feel "up and up". Bile makes and purifies the blood. It's the work of a natural but not a natural or necessary in them. Ask for Carter's Little Liver Pills by name! It stubbornly refuse anything else, etc.

Thou Shalt Not Love

— A NOVEL BY —
GEORGIA GRAIG

CHAPTER I.—Continued

Starr had not realized that her temperamental words had been spoken aloud until the man's voice interrupted. It was a crisp, pleasant voice, with a lacy, amused drawl. She whirled around to face him, hands gripping her handbag tightly as the nearest support.

The man had detached himself from the careless crowds, and stood not far from her elbow, indolently leaning against a corner of the show window frame. He was looking down on her with quizzical gray eyes that held a glint of humor in their depths. For that first startled moment Starr's complete vision was filled with him. He was tall, handsome in a bronzed, broad-shouldered slim-waisted way, with a physique that bespoke the owner's pride of its possession in his care. He wore dark, smartly tailored clothes which were unerringly placed in their category of good taste. Money, too, of course. That he was accustomed to that as to the air he breathed was in his slightly arrogant features, features which had just the proper tinge of hardness to give him an air of interesting masterfulness.

The smile of tolerant—or was it condescending?—amusement curved his lips more widely as he looked straight into Starr Ellison's upturned face, from which the eagerness of her passionate plea had not fled.

"So you want to play, do you?" he repeated, with maddeningly slow emphasis.

Starr could not understand why

on the instant she was not annoyed at his intrusion, or his very apparent jibing. Such a short time ago the Starr Ellison she had always known would have fought furiously: "Masher!" and one look would have been a crushing retort to him.

Today it did not matter. Such things were of so small account. Nothing mattered, anyway. Everything was an affair of relativity. Things were important only because of the bearing they had on your future. With barely six months to live, which could be considered practically no future at all, what did it matter what she might say or do? What anyone else in the world might say or do?

Even though she was surprised at herself, steadily Starr returned the contemplative scrutiny of the gray eyes that were amusingly regarding her. She placed him. Really. The man before her represented that gay, smart world she had never known, for which she had yearned—the other half of the world which knew how to play. He had taken advantage of the opportunity. He stood for all she had lost in life and could never hope to attain.

She cried out at him suddenly, her eyes blazing at him as though, she were, through him, hurling her defy to earth and heaven:

"Yes, if you must have it! More than anything else in this wide world, I want to play!"

The smile in his eyes was tauntingly on his lips, as he drawled:

"That, I should imagine, should be something not too hard to arrange—"

But, aghast at herself, Starr was backing away, long lashes dropped over her confused eyes. What had she done? Unnoticed she backed into a passerby. The gray-eyed man's hand went out to touch her arm.

"Wait a minute," he said. "We ought to talk this over a bit, hadn't we? There's no hurry. . . . His smile was friendly. "The Arab, you know, have a saying: 'What is there to hurry for? We are all going the same way. Why should we try to pass one another? Let us enjoy today, for today will never come again. . . .'" Of course this isn't Egypt, but—"

He stepped short at the look of blazing fury in the depths of the girl's dark, mysterious eyes. Her voice was a flame at him.

"I hate Egypt!"

Then she was gone, flying up the avenue, losing herself in the crowds, never looking back. Michael Fairbourne stood staring after her. Then he grinned and shrugged as he lighted a cigarette and moved carelessly along the street.

"Seem to have dubbed my shot again, eh?" he murmured. Then he glanced along the street as if again seeing the black-eyed girl with the camelid skin. "Still, I'm wondering a little—"

CHAPTER II.

There was no good reason for Starr Ellison to be on Fifth Avenue that cheerful early Autumn mid-day. Only that it was not Sixth Avenue. Nor was there along it any employment offices, wordlessly insulating on her need for job hunting in the seriousness.

After her visit to the doctor, with whose smiling assistant she had, incidentally, led the greater part of her small remaining store of cash—for the privilege of being told she had only six months more of life—such small and distasteful matters as searching for a job appeared of small moment. Especially when there were no jobs. Why keep on hunting for one by which she could merely keep the breath of life in her body for six months more? It hardly seemed worth while.

Such thoughts were in Starr's mind as she fled along the street after her tempestuously uttered rebellion against Fate in the atmosphere of the prosperous Avenue. Nevertheless, she mechanically turned at the next corner and sought the street made clamorous by the overhead, and headed for the agencies which were on her list and not already tried that day. She couldn't be a quitter entirely, she supposed, even if she had so short a time to fight. Work was most necessary at the moment. Vitally so, for she had a most distasteful memory of her absence that morning with the keeper of her rooming house. A dreary, hopeless kind of place it was, but Mrs. Maloney who kept it, had made it quite plain to Miss Ellison

that she had waited for her rent quite long enough, and that while she was right sorry that Miss Ellison couldn't get a job, there were plenty of other people in the same fix. After all, Mrs. Maloney was not an eleemosynary institution. In other words, Mrs. Maloney had conveyed to Starr that if she was prepared to pay her three weeks' arrears of rent that she could have her clothes. Otherwise—

None too pleasant a prospect, and it was beginning to look like a rough ride ahead for a girl who, at most, had in her purse only enough for lodging for a night or two somewhere—without baggage. Even if she were going to pass out in six months, in the meantime, she supposed, she would have to sleep somewhere.

A wry smile crossed Starr El-

son's lips as she rushed along. She—she!—who didn't know where she was going to sleep that night, had been wasting her time on Fifth Avenue, rebelling against not having a taste of life. She had been wanting to play!

She didn't know that noon had come, and forgot that her breakfast had been a doughnut and a cup of coffee until she suddenly realized that the crowds who were jostling her, elbowing her, were making their way into the rows of eating places that sat cheek by jowl along the cross street. She stopped still before one of them, drawn irresistibly by the sight of the good things to eat temptingly displayed. Another show window!

She forgot that she was hurrying to look for a job, forgot, she had wanted to play, forgot even for that minute what that doctor had told her, as her eyes widened at sight of the food, and then swept on further to the people at the tables. In her eyes was an expression of looking upon some amazingly absorbing scene, but it was no more upon which she gazed than the vista of food and warmth that spread out in one of those restaurants which not so long ago Starr Ellison would not

have bothered to give a passing glance.

Two prosperous looking business girls were having their luncheon near the window—a substantial meal, with a steak that was simply oozing buttery gravy, new peas and the crispest looking salad.

Stony Plain and District.

Mr Eddie Enders arrived back last week from Westminster.

At the nomination, Monday, for the office of Councillor, to replace Mr Kowensky, Mr J Bruda was the only name submitted, and he was declared elected by acclamation. Mr. Jas. Malloch was returning officer.

Mrs Paul Werner was taken in yesterday to Misericordia hospital for treatment.

Mr Pat Gannon was down from the Coal Branch, for a visit at his home here.

The birthday party on Cobblers' Row, Saturday night and Sunday morning, was a "howling success." If in doubt, ask a neighbor.

Mr and Mrs D Anderson, Chisholm, were visiting this week with relatives in Stony Plain.

Stony's Senior ball team play a home game tonight, July 23d, with North Edmonton team.

Another change has been made in the mail train service. The mail train for the City now goes thru Monday, Thurs. and Sat. mornings.

The west-bound bus traffic was heavy on Saturday last, with the Exhibition visitors returning to their homes at the close of the Fair. On Saturday evening it took 3 buses and 2 taxis to handle the thrupassengers.

Stony's basketballers got as far as the semi-finals in the tournament last week at the Edmonton Ex. In the next event they were beaten by Bon Accord 34-24.

New and second-hand text books for public and high schools on sale at The Sun Book Shop.

Urself's Melody Four are billed to play at the dance to be held Friday, July 31st, at Muir Lake Community Hall.

BUTTER AND EGGS WANTED at The Royal Cafe

C. N. Train Service.

Trains from the West arrive here Monday, Thursday and Saturday at 4:51 a.m.

Trains from the East arrive here on Sunday, Wed., Friday at 10:34 p.m.

They Miss The Scenery.

It's a funny thing, but some "pleasure motorists" drive as though they were on a 1000 mile road race. Just what pleasure there is in racing between one place where you stop for the night to another place where you will stop the next night, is a little difficult to understand. Hardly any scenery looks interesting when driving real fast.

You're spending a lot more money, too, when you're speeding. If your car goes about 21 to the gallon at thirty, it only 15 at sixty. And what speeding does to your oil consumption is worse. At sixty you can use anywhere from four to ten times as much oil as you do at half that speed. Take it a little easier, then, and see more country and spend less of your money.

Higher Grain Prices Likely.

Higher grain prices as a result of the drought, which is the worst in the history of the prairie west are forecast by J J MacLellan, vice president of United Grain Growers and former minister of public works in the U.F.A. government.

Mr MacLellan, who was an Edmonton visitor this week, declared that "it appears that a fair crop will be harvested in Edmonton district, providing all goes well from now on."

Mr MacLellan had just completed a motor trip thru the eastern part of the Province.

Spruce Grove News.

Mrs R N Sherwin, Mayerthorpe, was a Friday visitor with Mrs James Elder.

Mr and Mrs Forbes have returned from their motor trip to Westlock.

Mr Jack Shinbein had his father as a visitor during Exhibition week.

Negotiations are said to be under way for Messrs C and Wm Fuhr to take over the G W Davidson farm, in Holborn district.

Mr Harry Brox, who intended taking the excursion train to Vancouver, missed the train on Sunday, and is still here.

Mine Host Nafon is having a new concrete sidewalk laid along the Railway ave. front of the hotel, and also up the side street.

The Grove's football team played a return game up at the Enox Oval on Sunday, resulting in a tie 2-0.

It is said that a local man, a former elevator operator, will have charge of the Gillespie elevator, when the latter re opens.

For a big meal or a good lunch, try Jack Nichols, at the Hotel Restaurant.

The Grove's Basketballers.

Spruce Grove basketball players had quite an experi-

Invisible, But Important

Nobody pays much attention to the spark-plugs or the air filter until something goes wrong with them. Now, in the heavy driving season, is the time to have them looked over, however. Spark-plugs are sure to get coated with carbon, which wastes gasoline. It is a very inexpensive proposition to the plugs cleaned and if the distributor points are adjusted at the same time it will usually make the car run a whole lot better.

Once the air-filter fills up with dirt not sufficient air gets into mixture and no matter how the carburetor is adjusted, you are burning more gas than necessary. Therefore, have the filter cleaned regularly.

Wanted

Coach for Basketball team must be temperance in a n and unmarried; non smoker and able to act intelligently on orders from the players; able to pay own expenses on trips; a Yodler and sing-song leader preferred. Apply, enclosing testimonials and stating salary expected (if any) to Box 201 Sun.

COMPLETE YOUR TRAVEL ARRANGEMENTS AND BUY YOUR Steamship and Rail Tickets FROM THE LOCAL AGENT, CANADIAN NATIONAL Rail and Steamship Lines

ence at the games last week at Edmonton Ex. Their 2nd game—the semi-finals—the time for playing this had been switched on 2 hours ahead of the schedule time; thus taking the players unawares. However, 5 Grove players were got together, and played the Lathrop Elks and beat 'em 22 to 18. This was a particularly interesting game, especially when the Grove's team was reduced to 2 players by given penalties, and still they continued playing and beat the team from the North with its five players.

'Twas in the finals that the Grove's champions met defeat at the hands of Hairy Hill's team by 21-15.

The players report having had a very enjoyable time as guests of the Exhibition association.

Sunday's Ball Game.

The Grove's ball players crossed bats on Sunday last with a team from Irvington. Mr Gabel pitched for the Grovers. The features of the game were, loose stealing and the numerous "dropped" balls.

Mr Fred Loeblich was the umpire.

During the progress of the game the onlookers were under the impression that the visitors were well ahead in the scoring. On the result being announced that the Grovers had won, 12 to 11, a number were surprised, and 3 spectators fainted.

A goodly sum was collected when the Man-With-The-Hat made his rounds. The amount would have been greater had the collector come over to the motor cars, where two Scotsmen were sitting, each with a shilling in his fist, and naeboddy called "Och, weel mebbe Em, will no forget us the next time."

To Rent or For Sale.

The Christie 4 room house, on lots 1 & 2, block 3, Main St., opp the Royal Hotel, Stony Plain. For further information Apply at The Sun Office.

WITH CANOE AND PADDLE ON CANADA'S WATERWAYS

HANGE is the prime essence of a vacation and a canoe trip in Canada is one method by which the stress of daily life can be exchanged for a tranquil, carefree existence. It may be for a limited time only but its effects are felt all the year round. Jostling crowds, rumble of traffic, hot pavements and stifling air have no place in the life of the canoeist.

A large number of interesting routes are outlined in "Canoe Trips in Canada," a booklet recently issued by the National Parks of Canada, Department of the Interior, Ottawa. Following the routes described therein one can drift lazily along or re-live the strenuous days of the voyageur. There are cruises which lead for a hundred miles through canal, stream and lake with alternating civilization and lightly wooded country. There are long, smooth flowing rivers and placid lakes on

which one can travel for days, and by contrast rushing streams which ever and again break into foaming rapids and thundering falls. There are adventurous trips through wilderness country along routes once followed by Indian and fur-trader, now almost forgotten so seldom are they travelled. Strange geological formations, wild life, good fishing, the charming and the picturesque await the advent of one's canoe on the numerous and varied water trails of Canada.
